SUMMARY

Frontend-leaning full-stack engineer and Computer Engineering graduate (York, 2025) with React + TypeScript strength. Currently running VamoKora, a live app used weekly by a real, growing soccer crew — owning everything from a multi-tenant PostgreSQL schema (30+ models) to the React/TypeScript frontend, with 2,200+ automated tests guarding every release. Strong programming fundamentals across Node.js, Python (FastAPI), and SQL; daily user of AI coding assistants.

SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), Python, SQL, Swift
- **Frontend:** React, Next.js (App Router, RSC), Tailwind CSS, HTML5/CSS3
- **Backend:** Node.js, REST API design, PostgreSQL, Prisma ORM, custom session auth
- **Tools:** Git/GitHub, GitHub Actions (CI/CD), Vercel, Docker, Sentry, Vitest, AI coding assistants (Claude Code, daily use)

EXPERIENCE

VamoKora — Founder & Developer · Jun 2026 – Present
Live PWA for recurring pickup soccer: RSVPs, team drafting, cost splitting, player ratings · Next.js · TypeScript · PostgreSQL · Prisma · vamokora.com

- **Visual design & UX:** designed the full interface — layout, visual styling, and interaction flows including a matchday narrative covering scheduling, team draws, and post-match voting — and implemented it as a responsive, installable PWA, iterating weekly on feedback from real players.
- **End-to-end ownership:** designed a multi-tenant PostgreSQL schema (30+ models) with application-layer access guards; built the REST API layer and the full React/TypeScript frontend.
- **Performance:** cut the heaviest page's load from ~3.3s to ~1.1s by batching 8 sequential database reads into one parallel fetch and adding indexes after EXPLAIN showed sequential scans (measured by hand).
- **Reliability:** 2,200+ automated tests across 180+ test files; custom PII-scrubbing Sentry hook; features shipped weekly to a real, growing soccer crew.

KonnectTaps — Co-Founder & Frontend Developer · Jan 2024 – May 2026
NFC digital business cards — tap to share contact details · 3-developer team · React · Next.js · MySQL · konnecttaps.com

- **Ownership:** built the frontend from the ground up in React and Next.js with two other developers on scope and product direction.
- **Navigation safeguard:** built a custom navigation guard by patching the History API to intercept anchor clicks and popstate/beforeunload events, replacing native browser prompts with an in-app warning.

PROJECTS

FootyTracker — Solo Product Owner, Designer & Developer · Oct 2026 – Present
Apple Watch + iPhone app for amateur soccer players · Swift · SwiftUI · HealthKit · WatchConnectivity · TestFlight (internal)

- **Football-specific stats:** records a game on the Watch and shows what Apple's Workout app doesn't: true time on pitch (bench and half-time removed), heart-rate zones, work rate, GPS heatmap on a drawn pitch, and trends vs past games.
- **Designed for real games:** tested on my own devices and redesigned — after a missed "sub on" tap lost half a game — toward a no-pause Watch design with automatic break detection the iPhone asks you to confirm.
- **Shipping & reliability:** Watch-to-iPhone sync that works with the phone app closed (queued transfer, duplicate protection), crash recovery mid-game, and Apple Health import that follows deletions; build uploaded to TestFlight (external testing not started yet); 100+ unit tests; used Claude Code for AI-assisted development, reviewing and testing all generated code before merging.

SOSO — Satellite Operations Services Optimizer (Capstone) · Sep 2024 – Apr 2025
Canadian Space Agency · React · REST APIs

- Built the React dashboard visualizing satellite telemetry and orbital pass schedules for CSA stakeholders; authored system documentation and design trade-off analysis.

EDUCATION

York University — Lassonde School of Engineering · Graduated Jun 2025
B.Eng., Computer Engineering · Toronto, ON

ADDITIONAL EXPERIENCE

Marché Adonis — Assistant Deli Manager (Promoted from Clerk) · Nov 2017 – Present
Mississauga, ON

- Promoted from Clerk to Assistant Deli Manager in June 2025; run daily operations and scheduling for a 13-person team and act as escalation contact on high-volume shifts. Worked here throughout a full-time engineering degree.
